

Be-Ge 8037 / 8137

The seat illustrated is fitted with extra items

The narrow version, 8037.

The wide version, 8137

BE-GE 8037/8137 An air suspended driver seat with integrated compressor for fork lifters and construction vehicles where high seating comfort and low seat height is required. The seat is available in two basic variants, manual or automatic weight control. The seat- and back cushions are available in two different models where the 8137 is the wider and 8037 the narrow model.

The seat can be equipped in a wide range of armrests, electrical heating, headrest, seat belt, lumbar support (air), safety contact in the seat cushion and be trimmed in fabrics according to any need.

BE-GE, the name means a great deal: not at least comfort and quality, both physical and technical.

Air valve, manual setting

BE-GE

— Establ. 1934 —

Technical information

Compressor and electrical heating can be installed with 12 V or 24 V.

If headrest is to be later then the back cushion needs to be prepared from the factory.

The armrests can be mounted in two ways, on the seat cushion or on the seat stand

8037 / 8137 are approved according to EN 13490 (IT 1 and IT 2).

With seat belt it is approved according to FEM Section IV industrial trucks.
